Notice Concerning the Decommissioning of Anan Power Station Unit 3 and Sakaide Power Station Unit 3

Shikoku Electric Power Company hereby announces that it has decided to decommission Anan Power Station Unit 3 (450 MW, oil-fired, Anan, Tokushima Prefecture) and Sakaide Power Station Unit 3 (450 MW, oil- and coke oven gas-fired, Sakaide, Kagawa Prefecture).

Operations at Anan Power Station Unit 3 have been suspended since January this year due to the aging of its equipment and decrease in opportunities for operation. Since there is no prospect of it being utilized in the future, the Company has decided to proceed with the necessary procedures and decommission the unit by approximately June this year.

Meanwhile, since commencing operations, Sakaide Power Station Unit 3 has generated electricity using oil and by-product gas (coke oven gas) from the adjacent coke manufacturing plant, contributing to the stable supply of electricity up to the present. However, as the supply of coke oven gas from the adjacent plant will be discontinued in the second half of fiscal 2027, remedial measures will be required to switch to exclusively oil-fired operations. In addition, taking into account the aging of the equipment and the decrease in its necessity from the perspective of demand and supply, the Company has decided to decommission the unit by the second half of fiscal 2027 in conjunction with the discontinuation of the coke oven gas supply.

We would like to express our sincere gratitude for the tremendous understanding and cooperation we have received from the local community and many others over the past 50 years with regard to the operation of both units.

The Company will continue to take all possible measures to ensure a stable supply of electricity.

The impact of the decision to decommission the two units on business performance is expected to be minor.

(Reference) Overview of Anan Power Station Unit 3 and Sakaide Power Station Unit 3

	Anan Power Station Unit 3	Sakaide Power Station Unit 3
Rated output	450MW	450MW
Fuel	Oil	Oil/Coke oven gas
Start of operations	June 1975	April 1973
