### Flow Rate

## Financial Sensitivity for Key Factors

|                                    | FY2019 |
|------------------------------------|--------|
| CIF price: coal (1\$/t)            | 6      |
| CIF price: crude oil (1\$/b)       | 1      |
| Exchange rate (¥1/\$)              | 8      |
| Nuclear power capacity factor (1%) | 4      |
| Flow Rate (1%)                     | 2      |

<sup>\*</sup>Because this sensitivity is theoretical value calculated based on some assumption, real impacts could change depending actual supply/demand situation.

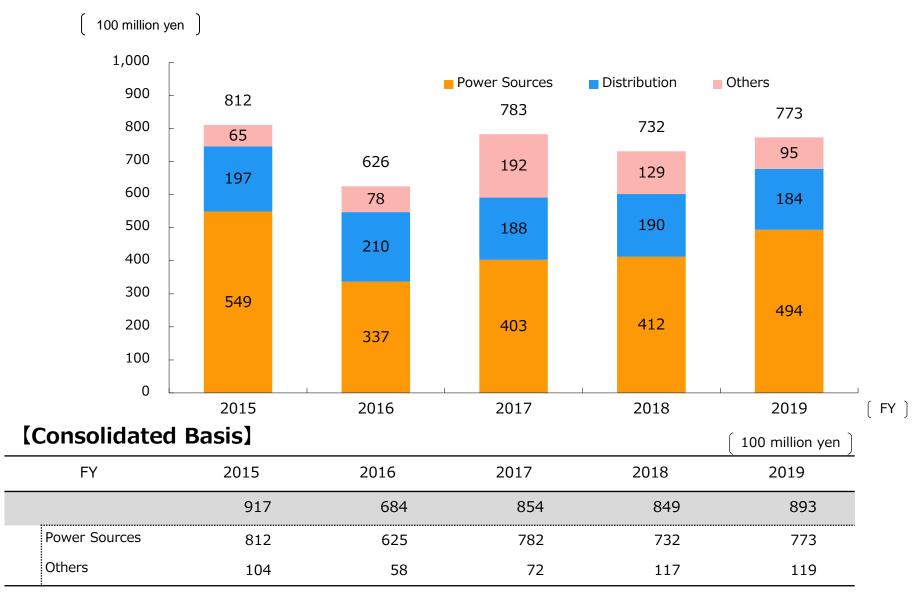

<sup>\*</sup>Fluctuation in fuel prices causes time lag between payment of fuel cost and reception of fuel cost adjustment charges, resulting in temporary increase or decrease in profits. Time Lag Effect above is this temporary increase or decrease, assuming that time lag does not take place.
